

Chapter 1

Page 1 of 12

The paginator is a strip of columns and a scrollLeft, and nothing else. A turn touches only transform. Neighbouring pages are laid out before they are needed, so the frame under the finger has no layout in it. Position is anchored to the text, never to a scroll offset, because a reader who changes the size of the type has not changed their place in the sentence they were reading.

Chapter 1

Page 2 of 12

The paginator is a strip of columns and a scrollLeft, and nothing else. A turn touches only transform. Neighbouring pages are laid out before they are needed, so the frame under the finger has no layout in it. Position is anchored to the text, never to a scroll offset, because a reader who changes the size of the type has not changed their place in the sentence they were reading.

Chapter 1

Page 3 of 12

The paginator is a strip of columns and a scrollLeft, and nothing else. A turn touches only transform. Neighbouring pages are laid out before they are needed, so the frame under the finger has no layout in it. Position is anchored to the text, never to a scroll offset, because a reader who changes the size of the type has not changed their place in the sentence they were reading.

Chapter 1

Page 4 of 12

The paginator is a strip of columns and a scrollLeft, and nothing else. A turn touches only transform. Neighbouring pages are laid out before they are needed, so the frame under the finger has no layout in it. Position is anchored to the text, never to a scroll offset, because a reader who changes the size of the type has not changed their place in the sentence they were reading.

Chapter 2

Page 5 of 12

The paginator is a strip of columns and a scrollLeft, and nothing else. A turn touches only transform. Neighbouring pages are laid out before they are needed, so the frame under the finger has no layout in it. Position is anchored to the text, never to a scroll offset, because a reader who changes the size of the type has not changed their place in the sentence they were reading. The cornerstone of the whole arrangement is measurement.

Chapter 2

Page 6 of 12

The paginator is a strip of columns and a scrollLeft, and nothing else. A turn touches only transform. Neighbouring pages are laid out before they are needed, so the frame under the finger has no layout in it. Position is anchored to the text, never to a scroll offset, because a reader who changes the size of the type has not changed their place in the sentence they were reading.

Chapter 2

Page 7 of 12

The paginator is a strip of columns and a scrollLeft, and nothing else. A turn touches only transform. Neighbouring pages are laid out before they are needed, so the frame under the finger has no layout in it. Position is anchored to the text, never to a scroll offset, because a reader who changes the size of the type has not changed their place in the sentence they were reading.

Chapter 2

Page 8 of 12

The paginator is a strip of columns and a scrollLeft, and nothing else. A turn touches only transform. Neighbouring pages are laid out before they are needed, so the frame under the finger has no layout in it. Position is anchored to the text, never to a scroll offset, because a reader who changes the size of the type has not changed their place in the sentence they were reading.

Chapter 3

Page 9 of 12

The paginator is a strip of columns and a scrollLeft, and nothing else. A turn touches only transform. Neighbouring pages are laid out before they are needed, so the frame under the finger has no layout in it. Position is anchored to the text, never to a scroll offset, because a reader who changes the size of the type has not changed their place in the sentence they were reading.

Chapter 3

Page 10 of 12

The paginator is a strip of columns and a scrollLeft, and nothing else. A turn touches only transform. Neighbouring pages are laid out before they are needed, so the frame under the finger has no layout in it. Position is anchored to the text, never to a scroll offset, because a reader who changes the size of the type has not changed their place in the sentence they were reading.

Chapter 3

Page 11 of 12

The paginator is a strip of columns and a scrollLeft, and nothing else. A turn touches only transform. Neighbouring pages are laid out before they are needed, so the frame under the finger has no layout in it. Position is anchored to the text, never to a scroll offset, because a reader who changes the size of the type has not changed their place in the sentence they were reading.

Chapter 3

Page 12 of 12

The paginator is a strip of columns and a scrollLeft, and nothing else. A turn touches only transform. Neighbouring pages are laid out before they are needed, so the frame under the finger has no layout in it. Position is anchored to the text, never to a scroll offset, because a reader who changes the size of the type has not changed their place in the sentence they were reading.
